KAUNG KHANT KYAW

Wolli Creek, Sydney NSW | 0410 752 683 | kankhoukkyaw@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Final-year Bachelor of Computing Science (Honours) student at UTS with a WAM of 77 and High Distinctions in Data Visualisation and Data Analytics. Completed a data analyst internship at KBZ Bank and has hands-on experience turning raw data into dashboards and business insights using SQL, Power BI, Tableau and Python. Built projects on e-commerce, retail and trade data covering data modelling, DAX, window functions and time-series forecasting. Seeking a Data Analyst or BI Analyst internship or graduate role.

SKILLS

BI and Visualisation: Power BI (DAX, Power Query, data modelling), Tableau (calculated fields, dashboards, story points), Excel (advanced)
SQL: PostgreSQL, joins, CTEs, window functions, views, schema design, data quality checks
Python: pandas, NumPy, matplotlib, statsmodels, scikit-learn, SciPy, Streamlit, Jupyter Notebook
Analytics: data cleaning, ETL, KPI reporting, cohort analysis, customer segmentation (RFM), time-series forecasting, benchmarking
Other Tools: Git, GitHub, KNIME, SAS, R, VS Code
Certifications: Microsoft Power BI: Data Analysis and Visualisation; Extract, Load and Transform Data
Languages: English (Fluent), Burmese (Native), Thai (Native)

EDUCATION

Bachelor of Computing Science (Honours), University of Technology Sydney | WAM: 77 Feb 2024 – June 2027 (Expected)

- High Distinctions: Natural Language Processing (93), Data Visualisation and Visual Analytics (92), Introduction to Data Analytics (88)

Diploma of Information Technology, UTS College | WAM: 80 Sep 2022 – Oct 2023

PROFESSIONAL EXPERIENCE

Data Analyst Intern, KBZ Bank, Myanmar Oct 2023 – Jan 2024

- Analysed and cleaned banking and customer data using Excel, SQL and Power BI, supporting routine reporting and business performance analysis.
- Developed and maintained Power BI dashboards and analytical reports tracking transaction activity, customer behaviour and other business KPIs for internal stakeholders.
- Identified trends and data-quality issues from operational datasets and communicated findings to the team to support data-driven business decisions.

Casual Team Member, Espresso You, Sydney Jan 2025 – Present

- Process high volumes of transactions accurately on POS systems while maintaining service quality during peak periods.
- Coordinate with team members across rotating shifts to reduce customer wait times and resolve customer issues directly.

PROJECTS

E-commerce Performance Dashboard | Power BI, DAX, Power Query 2026

- Built a four-page Power BI report on 99,000 marketplace orders covering revenue, logistics, customers and sellers.
- Modelled nine related tables and wrote 18 DAX measures (CALCULATE, SUMX, RANKX, DATEDIFF) for KPIs including on-time delivery rate, average order value and repeat customers.
- Found that 92% of orders arrive on time and only 3% of customers reorder, pointing to retention as the main growth opportunity.

Marketplace SQL Analysis | PostgreSQL 2026

- Designed an eight-table relational schema with primary keys, foreign keys and check constraints, and loaded 99,000 orders from CSV files.
- Wrote nine analytical queries using CTEs and window functions (LAG, RANK, DENSE_RANK, NTILE, LEAD) for revenue trends, cohort retention, RFM segmentation and seller ranking.
- Showed that late deliveries average under 3 stars against 4.2 for on-time orders, and that fewer than 20% of sellers generate 80% of revenue.

Australian Retail Turnover Forecasting | Python, pandas, statsmodels 2026

- Cleaned ABS monthly retail turnover data for NSW, Victoria and Western Australia and compared Seasonal Naive, Holt-Winters and SARIMA models using a time-based train and test split.
- SARIMA achieved the lowest error in all three states (MAPE of about 1.4%) and reduced MAE by up to 65% against the baseline.

Aged Care Efficiency Benchmarking (Capstone) | Python, SciPy, pandas, Excel 2026

- Benchmarked operational efficiency across 23 residential aged care facilities in a six-person team, building the Data Envelopment Analysis (DEA) model and code.
- Engineered a resident acuity index from AN-ACC classifications to control for case-mix, and tested CRS and VRS models under multiple output weightings.
- Identified best-practice facilities through peer benchmarking and quantified improvement targets for the least efficient sites.

Australia Trade Trends Dashboard | Tableau, Excel 2025

- Analysed 37 years of ABS import and export data across 10 product categories using Tableau dashboards and story points.
- Identified natural gas rising from 2% to nearly 40% of energy exports while coal fell from 85% to 55%.

Data Cleaning and Pre-Analytics Toolkit | Python, Streamlit, pandas 2026

- Built a web application that lets users upload, profile and clean messy CSV and Excel files without writing code.
- Found and fixed a pipeline ordering flaw where negative values stored as text were missed, and redesigned the cleaning steps into a single sequential pipeline.

Fashion Image Recommendation System | Python, TensorFlow, scikit-learn Nov 2024

- Trained an image embedding model on 44,000 product photos using transfer learning (ResNet50V2) and nearest neighbour search, achieving 90% precision on the top three recommendations.

LEADERSHIP AND ACTIVITIES

U:PASS Peer Learning Leader, Foundation Mathematics and Mathematics 1, UTS 2024 – 2025

- Planned and ran weekly peer-learning sessions, explaining quantitative concepts to students from diverse academic backgrounds.

Engineers Without Borders Showcase, Winner (Autumn 2024), UTS 2024

- Contributed to a winning team project designing a community early warning system for Saibai Island.

Memberships: UTS AI Society, UTS Myanmar Student Association

Volunteer: NSW Seniors Festival Expo 2026, Business Excellence Australia Conference.
